

Port of Edmonds Wi-Fi

The Port of Edmonds offers complimentary casual use Wi-Fi for customers. The service offered is 1 megabit per second download speed and 1 megabit per second upload speed. It is intended to allow users to check e-mail and use the internet. It is not intended or sufficient to stream movies or stream video from a security camera inside your boat.

Unlike your home cable, DSL, or FIOS connection, you are not assigned a static IP address. The Port has purchased a group of IP addresses. This means that each time you log in, you will likely get a different IP address. In addition, as the Port has a limited number of IP addresses, the system will log your computer off after a period of inactivity so that the address is available for another user who wants to actively use the service.

Frontier is the Wi-Fi service provider and informs the Port that there is a known issue with Apple products. If you are having trouble connecting to the Port's Wi-Fi system with your apple product, please contact the Frontier Help Desk at 1-800-469-6519.

If you are having other connection problems please contact the Frontier Help Desk at 1-800-469-6519. Frontier tech support wants to talk to you directly to get you up and running.

Please contact the Marina Operations office for Wi-Fi access user name and password information
